**Fast Track - Applying Aruba
Switching Fundamentals for
Mobility**

QUESTION: 1

Which settings are required on ArubaOS switches for Aruba AirWave to discover, monitor, and manage them?

- A. credentials for Telnet or SSH login and an HTTPS certificate
- B. SNMP v2 community or v3 user and an HTTPS certificate
- C. credentials for Telnet or SSH login and an SNMP v2 community or v3 user
- D. shared cluster key and an SNMP v2 community or v3 user

Answer(s): A

QUESTION: 2

What is one requirement to combine Aruba 5400R zl2 Series switches in a Virtual Switching Framework (VSF) fabric?

- A. One of the switches must be an Aruba 5412R switch, while the other member can be any switch in the 5400R series.
- B. Both of the members must have two management modules.
- C. The switches must operate in v3-module only mode: any modules of an earlier version are automatically disabled.
- D. The interfaces assigned to the VSF link must be pre-configured as part of a link aggregation.

Answer(s): A

QUESTION: 3

Currently the routing switches shown in the exhibit have only connected IP routes. The network administrator needs to add static routes to support communications between subnet 10.1.4.0/24 and subnet 10.1.8.0/24. Which switch or switches require a static route to 10.1.8.0/24?

- A. Switch-3 only
- B. Switch-1 and Switch-3
- C. Switch-1 only
- D. Switch-1 and Switch-2

Answer(s): B

QUESTION: 4

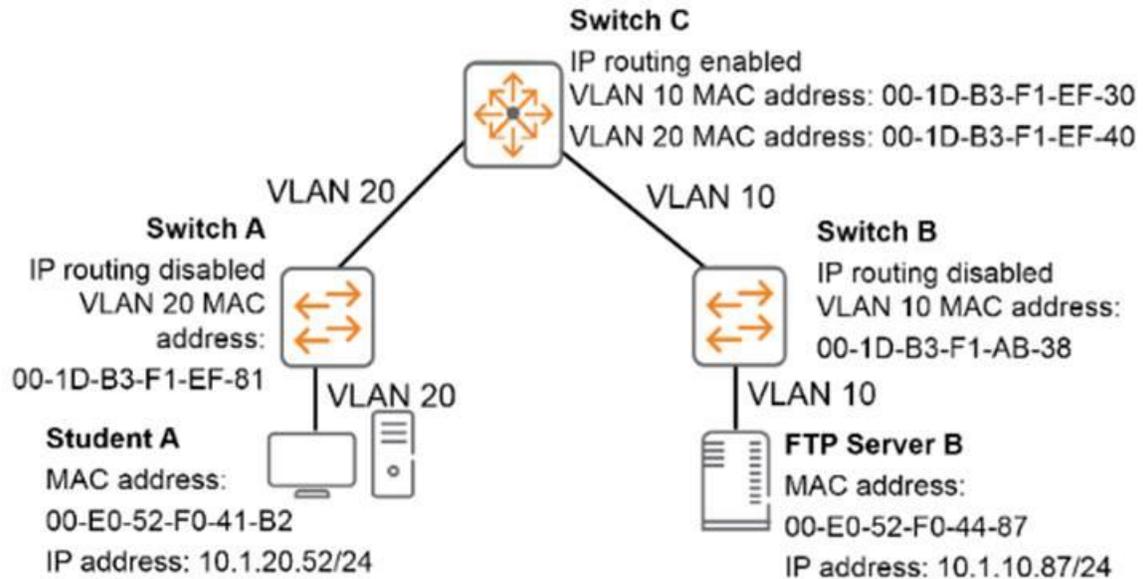

An ArubaOS switch operates at factory defaults and has a reachable IP address. How can network administrators access the switch CLI ?

- A. from the console port with the default username and password, but not from Telnet at all
- B. from the console port without authentication, but not from Telnet at all
- C. from the console port without authentication or from Telnet without authentication
- D. from the console port without authentication or from Telnet with the default username and password

Answer(s): A

QUESTION: 5

Refer to the exhibit.

The Student A client needs to connect to FTP Server B. Student A sends the necessary ARP request and receives a reply. Which destination MAC address does the Student A client use in the FTP packet to FTP Server B?

- A. 00-E0-52-F0-41-B2
- B. 00-E0-52-F0-44-87
- C. 00-1D-B3-F1-EF-81
- D. 00-1D-B3-F1-EF-40

Answer(s): D

QUESTION: 6

A network administrator has set up a link between two ArubaOS switches. Both switches have an IP address in VLAN 1 and can ping each other in VLAN 1. The administrator then creates VLAN 2 and tags it on the same link of both switches.

- A. How can the administrator verify that the connectivity in VLAN 2 is functional between the two switches? Use either LLDP or ARP to test connectivity.
- B. Use LLDP to test connectivity.
- C. Assign each switch an IP address in VLAN 2. and use ICMP to test connectivity.
- D. Assign each switch an IP address in VLAN 2. and use LLDP to test connectivity.

Answer(s): B

QUESTION: 7
