When you upgrade Session Manager and you had been using the hardware SM-100, the network connection of the SM-100 must be moved to which port on the Session Manager server?

- A. eth2 port of 2<sup>nd</sup> NIC, labeled "2"
- B. eth2 port of 2<sup>nd</sup> NIC, labeled "3"
- C. eth0 port of 2<sup>nd</sup> NIC, labeled "1"
- D. eth0 port of 2<sup>nd</sup> NIC, labeled "0"

**Answer(s): B**

**QUESTION: 3**

How is Call Admission Control enabled?

- A. Call Admission Control is enabled in the SIP Entity by specifying a value for Average bandwidth per call and Managed Bandwidth
- B. Call Admission Control is enabled on the Session Manager instance by specifying a value for Average bandwidth per call and Managed Bandwidth
- C. Call Admission Control is enabled on a Location by specifying a value for Average bandwidth per call and Managed Bandwidth
- D. Call Admission Control is enabled on an Entity Link specifying a value for Average bandwidth per call and Managed Bandwidth on the Location screen in Session Manager

**Answer(s): C**

**QUESTION: 4**

An IMS type feature server has been installed by another administrator team. They have also configured Session Manager to route all incoming calls for user John Smith to be routed to the new feature server. It appears from traces and capturing network traffic that Session Manager does indeed route John Smith's incoming calls to the feature server, but that the feature server does not appear to take any action besides returning the request back to Session Manager.

Which field has been INCORRECTLY configured?

- A. Application Handle
- B. Entity Link port
- C. Originating Application Sequence
- D. Terminating Application Sequence

**Answer(s): A**

**QUESTION: 5**

Which two statements describe how adaptations affect the routing of a request? (Choose two)

- A. Session Manager matches the dialed digits after applying any administered incoming adaptation
- B. Session Manager matches the dialed digits after applying any administered outgoing adaptation
- C. Session Manager matches the dialed digits before applying any administered incoming adaptation
- D. Session Manager matches the dialed digits before applying any administered outgoing adaptation

**Answer(s):** A, D

**QUESTION: 6**

Which definition describes a Session Manager community?

- A. A community represents a group of users in a single location or group of locations. A community helps define maximum numbers of users in each location for purposes of bandwidth management, quality of service, and Call Admissions Control
- B. A community is a group of peer Session Manager instances in an enterprise organization. Each Session Manager in the community automatically shares configuration and policy data, meaning that administrators settings and policies only once and that all Session Managers will process requests in the same way
- C. A community represents all SIP Entities known to a Session Manager it is through the community that data from SIP Entities can be collected and merged, ready for easy analysis
- D. A community is a sub-divided group of users in which half of the group make use of one Session Manager as their Primary while the other half make use of a different Session Manager as their Primary Each half also makes use of the other Session Manager as their Secondary for purposes of redundancy

**Answer(s):** D

**QUESTION: 7**

What are two outcomes of running SMnet Setup on a server that has an existing installation of Session Manager? (Choose two)
